KINETIC BREACHING TOOL [KBT] PRODUCT SPEC SHEET

The KBT was purpose-built from the ground up to solve a specific problem for tactical units: filling the gap between manual forced entry and explosive breaching. This tool employs the best of physics in the form of a self-contained impact ram with powder-actuated cartridges that go directly into a door or entryway. The KBT captures the force of the ram within the tool, ensuring that no projectile or explosive energy leaves the device.

The KBT also increases operator safety by allowing operators to breach from behind a shield or to the side of the door. This is a ready-to-use device that can completely replace explosive and hydraulic breaching, battering rams, and other manual forced entry techniques that drain valuable time and energy from your tactical unit.

KBT KEY FEATURES:

- Powered by .45 caliber blanks
- Utilizes 8-round cylinder for multiple breaches
- Hardened impact steel ram resets in less than a second
- Delivers up to 850 ft./lbs. of force
- Breaches metal security screen doors
- Defeats outward opening steel doors in steel frame
- Capable of porting cinder block walls

AARDVARK is committed to providing the highest quality and most innovative integrated products and services possible. It is AARDVARK's objective to establish long term relationships with our clients and suppliers by always conducting ourselves with honesty, integrity, and dedication to our end users.

AARDVARK produces fully Integrated Systems of mission-specific modules and industry leading equipment designed to work together to accomplish our client's mission.

AARDVARK provides innovative integration and mission support services with top of market client service from a knowledgeable staff whose primary objective is ensuring the safety and operational effectiveness of our clients.
