

P7K9

KEY FEATURES

Key features for **P7K9** include:

- **BIOMECHANICAL DESIGN** – Engineered to provide maximum coverage in vital high-threat areas of the chest and neck, the P7K9 includes pivoting fasteners, structured ballistics, and a contoured profile allowing for maximum coverage without impeding the dog's ability to move, search, or bite
- **SCALABILITY** – Quick-release, pivoting buckles allow for the rapid attachment of the P7K9's included ballistic yoke to provide unprecedented protection when needed, but also allow the yoke to be easily removed for normal operations. Integrated anti-slip shoulder surfaces, which allows for better weapon retention
- **RAPID DEPLOYMENT** – Don, scale, or doff the vest without making your dog step into/through the armor in less than 30 seconds with adjustable Fastex buckles
- **CONCEALED LOW-PROFILE FASTENERS** – Stowable handles, concealed buckles, and a sleek profile prevent snags and hang ups, and makes it nearly impossible for a suspect to remove the armor during a bite
- **BETTER FIT** – Available in 3 sizes and designed for a perfect fit on any K9, with enough adjustability to maintain fit as the dog gains and loses day to day weight
- **GUARANTEED DURABILITY** – Stab-resistant and made with P7's lightest weight Level II ballistic armor package, the P7K9 is made in America and backed by PROJECT7's nose to tail 5-year warranty
